Humerus Fracture: Types, Causes, Treatment, and Healing Time There are three types of humerus fracture, depending on the location of the break: Proximal. A proximal humerus fracture is a break in the upper part of your humerus near your shoulder. Mid-shaft. Colles' Fracture (Distal Radius Fracture or Broken ... - WebMD A Colles' fracture -- or distal radius fracture -- is often called a "broken wrist." Technically, it's a break in the larger of the two bones in your forearm. Fracture of Time | Superhero Fanon Wiki | FANDOM powered ... This article is the fanon. For the object, please see Fracture of Time (Crystal) Second Fanfic by Adamantium93, sequel to The Coming Storm This is still under construction. Contents[show] Chapter 1 Three Minutes Ago William was comforting Shannon, Alex was talking with Hailey, and Jenny was.

Fracture - Official Site Fracture is a carbon-neutral company that is always on the lookout for innovative ways to protect our planet from the impact of waste and disposable products. From glass to production to packaging, we're committed to a small footprint. Compression Fracture - Symptoms, Causes and Spinal ... The most common type of compression fracture is a wedge fracture, in which the front of the vertebral body collapses but the back does not, meaning that the bone assumes a wedge shape. Sometimes, more than one vertebra fractures, a condition called multiple compression fractures. Fifth Metatarsal Fracture Surgery - AOFAS The base of the fifth metatarsal is divided into three fracture zones. Zone 1 fractures are avulsion or "chip" fractures that occur at the tip of the base of the fifth metatarsal. These fractures are typically treated without surgery using a cast, boot or hard-soled shoe. These fractures tend to heal within six to eight weeks.

Ankle fracture - aftercare: MedlinePlus Medical Encyclopedia Without surgery, your ankle will be placed in a cast or splint for 4 to 8 weeks. The length of time you must wear a cast or splint depends on the type of fracture you have. Your cast or splint may be changed more than once, as your swelling goes down. In most cases, you will not be allowed to bear weight on your injured ankle at first.
